

Article: [8 Ways Technology is Helping the Environment \(ecavo.com\)](http://ecavo.com)

| Plus: | Minus: | Interesting: |
|---|--|---|
| Less energy is being used to do things | Using less energy could mean changing how they work, which can be expensive and hard to do | How electric cars help reduce air pollution compared to gasoline cars |
| Energy production is becoming cleaner | Switching to cleaner energy sources cost a lot, some people would not want to pay | |
| Food Production is becoming more eco-friendly | Farmers may not want eco friendly since they are more expensive, people like cheap food | |

Summary:

The article discusses how technology benefits the environment through producing clean energy, reducing energy use in buildings and houses, recycling waste, supporting farmers, and keeping an eye on the environment to protect it better. Similar to what we said before about less energy being used to do things, energy production becoming cleaner, and food production becoming more eco-friendly.

Answer the following question: Is the technology in your article/video good for our society?

Yes, the technology discussed in the article helps society by addressing environmental issues and advancing sustainability, which creates a more prosperous and environmentally friendly future for future generations. Like technology that could make clean energy and reduce pollution, etc.
